

IT Project Management Tutorial

Final Project Documentation Guide

Purpose

The final project should demonstrate the complete journey of your IT project from:

Project Idea → Project Initiation → Planning → Risk & Control → Agile Product Planning → Sprint Planning → Sprint Execution → Review & Improvement

The final submission should be organized as **one complete project portfolio**.

Students are expected to update previous work based on instructor feedback before final submission.

1. Final Project Documentation Structure

No.	Section / Document	Main Content Required	Source Lab
1	Cover Page	Project title, team name, students, course, instructor, semester	General
2	Table of Contents	Organized list of all project sections	General
3	Project Overview	Project idea, problem, target users, expected value	Lab 1
4	Team Charter	Team members, communication method, work rules, responsibilities	Lab 1
5	Project Charter	Purpose, objectives, sponsor, scope, deliverables, assumptions, constraints, risks, success criteria	Lab 2
6	Business Case	Current problem, proposed solution, expected benefits, alternatives, recommendation	Lab 2
7	Stakeholder Register	Stakeholders, roles, interest, influence, expectations, communication method	Lab 3
8	Scope Statement	Product description, in-scope,	Lab 3

No.	Section / Document	Main Content Required	Source Lab
		out-of-scope, assumptions, constraints, deliverables, acceptance criteria	
9	Work Breakdown Structure	Major deliverables, work packages, activities, WBS hierarchy	Lab 4
10	Milestone Plan	Main checkpoints, planned dates, owners, current status	Lab 4
11	RACI Matrix	Responsible, Accountable, Consulted, Informed assignments	Lab 4
12	Risk Register	Risks, probability, impact, rating, response, preventive action, contingency plan, owner	Lab 5
13	Communication Plan	Communication activity, audience, owner, frequency, channel, storage	Lab 5
14	Quality Checklist	Quality criteria for documents and project work	Lab 5
15	Issue Log	Current issues, priority, owner, actions, status, resolution	Lab 5
16	Change Request	One or more formal change examples with impact analysis	Lab 5
17	Change Log	Summary of change requests and decisions	Lab 5
18	Agile Suitability Assessment	Why Agile/Scrum is suitable for the project	Lab 6
19	Scrum Team Assignment	Product Owner, Scrum Master, Developers	Lab 6
20	Scrum Framework Map	Sprint length, Scrum events, artifacts, commitments	Lab 6
21	Product Vision	Long-term direction and value of the product	Lab 7
22	Product Goal	Current major product objective	Lab 7
23	Epic List	Major product work areas	Lab 7
24	Feature List	Main capabilities under each	Lab 7

No.	Section / Document	Main Content Required	Source Lab
		Epic	
25	Product Backlog	User Stories, Acceptance Criteria, priority, Story Points, DoR, Sprint, status	Lab 7
26	Definition of Ready	Checklist used to determine whether stories are ready	Lab 7
27	Sprint Planning	Sprint number, length, capacity, selected stories	Lab 9
28	Sprint Goal	Main Sprint objective	Lab 9
29	Sprint Backlog	Selected stories, Story Points, tasks, owners, status	Lab 9
30	Task Board	To Do, In Progress, Review/Testing, Done, Blocked	Lab 9–10
31	Definition of Done	Quality conditions required before work is considered complete	Lab 10
32	Daily Scrum Notes	Short sample of progress, next work, blockers	Lab 10
33	Burndown Chart	Remaining work throughout the Sprint	Lab 10
34	Sprint Review Notes	Sprint Goal result, completed stories, feedback, backlog updates	Lab 11
35	Stakeholder Feedback	Feedback collected during Sprint Review	Lab 11
36	Sprint Retrospective	What went well, what did not, Start–Stop–Continue	Lab 11
37	Improvement Action Plan	Improvement action, owner, success measure	Lab 11
38	Lessons Learned	Important learning from the project	Lab 11
39	Final Project Status	Summary of what was completed and what remains	Final
40	Final Conclusion	Project value, key learning, future direction	Final
41	Appendices	Supporting diagrams, screenshots, boards, additional templates	Optional

2. Section 1 – Project Introduction

Item	What to Include
Project Name	Clear and professional project name
Background	Brief explanation of the current situation
Problem Statement	What problem is being solved
Target Users	Main users of the system
Expected Value	Why the project is useful
Project Type	Web, mobile, system, platform, etc.

Keep this section short.

Recommended length:

Half page to one page

3. Team Charter

Item	Required Information
Team Name	Project team name
Team Members	Names of all students
Team Leader	Team coordinator
Communication Channel	WhatsApp, Teams, etc.
File Storage	Google Drive, OneDrive, etc.
Meeting Frequency	Example: Weekly
Team Rules	Attendance, participation, deadlines
Work Distribution	How responsibilities are shared

4. Project Charter

The Project Charter officially defines the project.

Project Charter Element	Required Content
Project Name	Official project name
Background	Why the project is being proposed

Project Charter Element	Required Content
Problem Statement	Current problem
Objectives	What the project should achieve
Sponsor / Client	Project owner
Project Manager	Team leader / PM
Main Stakeholders	Major involved groups
High-Level Scope	Main project boundaries
Main Deliverables	Expected outputs
Assumptions	Planning assumptions
Constraints	Time, resources, technology, etc.
Initial Risks	Main early risks
Success Criteria	How success will be measured

5. Business Case

Section	Required Content
Current Problem	Existing business problem
Proposed Solution	Proposed system or product
Target Users	People benefiting from the solution
Expected Benefits	Business and user benefits
Alternative Solutions	Other possible approaches
Expected Complexity	Low / Medium / High
Main Risks	Important uncertainties
Recommendation	Why the proposed project should continue

6. Stakeholder Register

Identify the important people or groups involved in the project.

Stakeholder ID	Stakeholder	Role	Internal / External	Interest	Influence	Main Expectations	Communication
----------------	-------------	------	---------------------	----------	-----------	-------------------	---------------

Students should identify enough stakeholders to realistically represent the project.

Recommended:

7. Scope Statement

Scope Area	Required Content
Project Objectives	What the project aims to achieve
Product Scope	What the proposed system will do
Project Deliverables	Main project outputs
In-Scope Features	What is included
Out-of-Scope Features	What is excluded
Assumptions	Planning assumptions
Constraints	Known limitations
Acceptance Criteria	High-level criteria for project acceptance
Future Enhancements	Possible later improvements

8. Work Breakdown Structure

The WBS should show how project work is divided.

Recommended structure:

- Level 1 → Project**
- Level 2 → Major Deliverables / Phases**
- Level 3 → Work Packages / Activities**

Example:

1. Project Management

- 1.1 Project Charter
- 1.2 Scope Management
- 1.3 Risk Management

2. Agile Planning

- 2.1 Product Vision
- 2.2 Product Backlog
- 2.3 Sprint Planning

The WBS can be presented as:

- Hierarchy
- Tree diagram
- Numbered outline
- Table

9. Milestone Plan

Milestone ID	Milestone	Planned Date	Owner	Status
--------------	-----------	--------------	-------	--------

Examples:

- Project Charter Approved
- Scope Completed
- Product Backlog Completed
- Sprint 1 Started
- Sprint Review Completed
- Final Portfolio Submitted

Recommended:

6–10 important milestones

10. RACI Matrix

The RACI Matrix explains responsibility.

Use:

- **R = Responsible**
- **A = Accountable**
- **C = Consulted**
- **I = Informed**

Activity	Team Leader	Member 2	Member 3	Member 4	Instructor / Sponsor
----------	-------------	----------	----------	----------	----------------------

Include major project deliverables only.

11. Risk Register

Each team should identify realistic project risks.

Risk ID	Risk	Probability	Impact	Rating	Response	Preventive Action	Continuity	Owner	Status
---------	------	-------------	--------	--------	----------	-------------------	------------	-------	--------

Recommended:

8–10 risks

Risks should include different categories:

- Scope
 - Schedule
 - Team
 - Technical
 - Quality
 - Stakeholder
 - Communication
-

12. Communication Plan

Communication	Purpose	Audience	Owner	Frequency	Channel	Storage
---------------	---------	----------	-------	-----------	---------	---------

Examples:

- Team Meeting
 - Status Update
 - Risk Review
 - Sprint Review
 - Project Submission
-

13. Issue Log

Issue ID	Issue	Priority	Owner	Action	Status	Resolution
----------	-------	----------	-------	--------	--------	------------

Recommended:

At least 3 real or simulated issues

Students should understand:

Risk = May happen

Issue = Has happened

14. Change Management

Include at least one completed Change Request.

Change Request

Item	Details
Change ID	
Requested Change	
Requested By	
Reason	
Expected Benefit	
Scope Impact	
Schedule Impact	
Resource Impact	
Risk Impact	
Decision	Approve / Reject / Defer
Reason for Decision	

Also include a simple Change Log.

Change ID	Change	Decision	Status
-----------	--------	----------	--------

15. Scrum Team Assignment

Scrum Accountability	Assigned Student	Main Responsibility
Product Owner		Manage value and backlog priorities
Scrum Master		Help team use Scrum effectively
Developers		Create the Increment

16. Product Vision

Use a short statement.

Recommended structure:

For **[users]**, who **[have a problem]**, our **[product]** will **[provide value]**.

17. Product Goal

The Product Goal should describe one important future product outcome.

18. Epic and Feature Structure

Students should show the product hierarchy.

Epic ID	Epic	Feature ID	Feature
---------	------	------------	---------

Recommended:

3–5 Epics

Each Epic may contain several Features.

19. Product Backlog

The Product Backlog is one of the most important final deliverables.

Use the following structure:

ID	Epic	Feature	User Story	Acceptance Criteria	Priority	SP	DoR	Sprint	Status
----	------	---------	------------	---------------------	----------	----	-----	--------	--------

Recommended:

At least 8–12 User Stories

Each story should include:

- User role
- User need
- Value
- Acceptance Criteria
- Priority
- Story Points
- DoR status
- Sprint assignment
- Status

20. Definition of Ready

Include the team's DoR checklist.

Example:

A story is Ready when:

DoR Check	Required
User is clear	✓
Value is clear	✓
Acceptance Criteria exist	✓
Story is small enough	✓
Dependencies identified	✓
Story Points assigned	✓
Priority assigned	✓
Team understands the story	✓

21. Sprint Planning

Document your Sprint 1 plan.

Item	Required Information
Sprint Number	Sprint 1
Sprint Length	Example: 1 week
Start Date	
End Date	
Sprint Goal	
Team Capacity	Story Points
Selected Stories	Ready stories supporting Sprint Goal

22. Sprint Backlog

Story ID	User Story	SP	Main Tasks	Owner	Status
----------	------------	----	------------	-------	--------

The Sprint Backlog should match the selected Sprint Goal.

23. Task Board

Include either:

- Screenshot from Jira / Trello / ClickUp
- Or simple table

To Do	In Progress	Review / Testing	Done	Blocked
-------	-------------	------------------	------	---------

24. Definition of Done

Include the team's Definition of Done.

Example:

DoD Criterion	Required
Acceptance Criteria passed	✓

DoD Criterion	Required
Tasks completed	✓
Testing completed	✓
Work reviewed	✓
No critical defect remains	✓
Documentation updated	✓
Result is usable	✓

Remember:

DoR = Ready to Start

DoD = Truly Finished

25. Daily Scrum Notes

One short example is enough.

Team Member	Progress	Next Work	Blocker
-------------	----------	-----------	---------

Do not submit many Daily Scrum reports.

The purpose is to demonstrate understanding.

26. Burndown Chart

Include:

1. Sprint days.
2. Remaining work.
3. Line chart.

Example data:

Day	Remaining Story Points
Day 1	15
Day 2	13
Day 3	10
Day 4	8

Day	Remaining Story Points
Day 5	5
Day 6	2
Day 7	0

Students may use:

- Excel
- Jira
- Another project-management tool

After You set the story points, I want you to draw a Burndown Chart explaining the point you worked on.

27. Sprint Review

Item	Required Content
Sprint Goal	
Goal Achieved?	Yes / Partially / No
Completed Stories	
Unfinished Stories	
Increment Demonstrated	
Stakeholders	
Feedback	
Product Backlog Changes	
Next Recommended Priority	

28. Stakeholder Feedback

Include at least three feedback examples.

Feedback ID	Feedback	Action
FB-01		Add / Update / Reject / Future
FB-02		
FB-03		

Not all feedback must be accepted.

Students should explain why.

29. Sprint Retrospective

Use the simple:

Start – Stop – Continue

Start	Stop	Continue

Also explain:

- What went well?
 - What did not?
 - What should improve?
-

30. Improvement Action Plan

Improvement	Owner	Target	How Success Will Be Checked

At least one practical improvement action is required.

31. Lessons Learned

No.	What Happened?	Lesson Learned	Future Recommendation
1			
2			
3			

Recommended:

3–5 useful lessons

32. Final Project Status

Provide a short final status summary.

Area	Status
Project Initiation	Completed / Partial
Planning Documents	Completed / Partial
Product Backlog	Completed / Partial
Sprint Planning	Completed / Partial
Sprint Simulation	Completed / Partial
Review	Completed / Partial
Final Documentation	Completed / Partial

Also mention:

- What was completed.
 - What remains.
 - Future improvements.
-

33. Final Conclusion

The conclusion should briefly answer:

1. What problem did the project solve?
2. What value does the proposed solution provide?
3. What did the team learn from managing the project?
4. How did Agile/Scrum support delivery?
5. What would be the next step if the project continued?

Recommended length:

Half page

34. Suggested Final Document Order

Students should organize the final file as follows:

Order	Section
1	Cover Page

Order	Section
2	Table of Contents
3	Project Overview
4	Team Charter
5	Project Charter
6	Business Case
7	Stakeholder Register
8	Scope Statement
9	WBS
10	Milestone Plan
11	RACI Matrix
12	Risk Register
13	Communication Plan
15	Issue Log
16	Change Request & Change Log
18	Scrum Team Assignment
19	Product Vision
20	Product Goal
21	Epics & Features
22	Product Backlog
23	Definition of Ready
24	Sprint Planning
25	Sprint Backlog
26	Task Board
27	Definition of Done
28	Daily Scrum Example
29	Burndown Chart
30	Sprint Review
31	Stakeholder Feedback
32	Sprint Retrospective
33	Improvement Action Plan
34	Lessons Learned
35	Final Status
36	Conclusion
37	Appendices

35. What Students Do NOT Need to Do

To keep the final project manageable:

Students do **not** need to:

- Write long theoretical explanations.
- Repeat definitions from lab manuals.
- Prepare dozens of Daily Scrum reports.
- Create many Sprint simulations.
- Prepare several Change Requests unless useful.
- Add unnecessary diagrams.
- Write long paragraphs when a table is enough.

The final project should demonstrate:

Application, not memorization.

36. Recommended Final Portfolio Size

Quality is more important than page count.

A well-organized final portfolio may typically be around:

30–60 pages

depending on:

- Project complexity.
- Number of team members.
- Tables.
- Screenshots.
- Supporting evidence.

Students should avoid increasing page count unnecessarily.

37. Final Submission Checklist

Check

Complete

Check	Complete
Project Overview included	☐
Project Charter completed	☐
Business Case completed	☐
Stakeholders identified	☐
Scope clearly defined	☐
WBS included	☐
Milestones included	☐
RACI completed	☐
Risk Register completed	☐
Communication Plan completed	☐
Quality Checklist included	☐
Issue Log included	☐
Change Request included	☐
Scrum Team assigned	☐
Product Vision included	☐
Product Goal included	☐
Epics and Features defined	☐
Product Backlog completed	☐
Acceptance Criteria included	☐
Story Points assigned	☐
DoR included	☐
Sprint Goal prepared	☐
Sprint Backlog prepared	☐
Task Board included	☐
DoD included	☐
Burndown Chart included	☐
Sprint Review completed	☐
Stakeholder feedback documented	☐
Retrospective completed	☐
Lessons Learned included	☐
Conclusion included	☐
Documents are consistent	☐
Instructor feedback addressed	☐
All team members understand the project	☐

38. Final Evaluation Focus

The final project will mainly be evaluated on:

Evaluation Area	What Will Be Checked
Completeness	Required deliverables are present
Understanding	Students can explain their work
Consistency	Documents support each other
Practical Application	Concepts are correctly applied
Scope Management	Boundaries are clear
Planning Quality	Work and responsibilities are realistic
Risk Management	Risks and responses are meaningful
Agile Understanding	Scrum concepts are correctly applied
Product Backlog Quality	Stories are clear, prioritized, and testable
Sprint Planning	Selected work supports Sprint Goal
Quality Management	DoR and DoD are correctly applied
Sprint Monitoring	Task Board and Burndown are understandable
Review & Improvement	Feedback and retrospective are meaningful
Team Participation	All students understand the project
Presentation	Project is explained clearly and professionally

Final Advice to Students

Do not prepare the final project only to submit documents.

Prepare it so that your team can answer:

Why are we doing this project?

What are we delivering?

Who needs it?

How did we plan and control the work?

How did we organize the product using Agile and Scrum?

What happened during the Sprint?

What did we learn and improve?

If your team can clearly answer these questions using your own project documents, you are ready for the final discussion.
